Homework 2 (Prepositions)
Due: July 1st, 2011

Each of the sentences below contains the misuse of at least one preposition. Find it (them) and fix the problem(s). Some of the sentences also contain problems unrelated to preposition use. Fix these problems as well.

1. After Smith, we begin by rewriting the above equations into the following form:

2. Our ability to make strong statements in this theory is quite limited.

3. We consider the transformation T to be identical as the original.

4. This becomes weak as $M_{1/2} > 1$TeV.

5. The relation of the internal states between case 1 and case 2 is illustrated in Fig.3.

6. These results are the same with those found above.

7. The information of the charge distribution can be obtained in the following manner.

8. This behavior is associated to the spin degrees of freedom.

9. These functions are holomorphic except for the singular points listed above.

10. We expand this expression of the charge density up to the first order of the interaction, H_I.

11. This effect results from the second term in the right-hand side.

12. We study the breakup of ^{11}Be on a ^{208}Pb target.

13. Here, a is equivalent with a'.

14. This motion is always toward the most unstable direction.

15. This operator is understood as acting to even functions of x only.

16. The momentum dependence in this function cannot be ignored.

17. Our conclusion about τ is supported by these results.

18. This term has a strong influence to the shapes of the domains.

19. However, this function is finite at $x \to \infty$.

20. This behavior is independent from the finite-volume effect.

21. After the discovery of Jones, there have been many interesting developments.

22. This theory includes an assumption of the non-perturbative QCD effects.

23. Such effects are observed only in a small scale.

24. Oscillation occurs at $1 < x < 2$.

25. This value is determined as ≈ 4.1 MeV.

26. In this case, the strength of the first effect just equals to that of the second effect.

27. This is a model for cloud formation.

28. Our conclusion about this case is that the propagation velocity depends only weakly on the strength of the flucutations.

29. The detector is then inserted in the reaction chamber.

30. The results of this system are displayed in Table 1.

31. These points are discussed in detail from the next section.

32. These values are around 1.1 MeV.

33. The effect from A to B is much stronger.

34. Now, we mention about the existence of $\widetilde{L}^{-1}$.

35. This is done by expanding Q into a power series of ϵ.

36. Such behavior is seldom observed at the lower energy range.

37. In this case, the offspring have the same fitness with the parents.

38. These points are on the x-y plane.
